

Introduction

Dear customers, partners and agents. In this newsletter we present our depositing machines.

TCM – TRIKNO Confectionery Machine

The variety of TRIKNO depositing machines – one platform, numerous possibilities

Whether chocolates, bars, tablets or clusters – the requirements for modern depositing solutions are as diverse as the products themselves. With the Alpha and Eta series, we offer a modular platform that can be flexibly adapted to different production requirements.

Highest dosing accuracy

The quality of a product begins with precise dosing.

The TRIKNO depositing machines have been developed to ensure a consistently high dosing speed throughout the entire production period. This reduces product losses, minimizes excess weight and ensures consistent product quality.

Dosing Accuracy:
0.01g ±0.1%

Whole nuts up to
38%

Piston/nozzle plate change time:
5 min

Your benefits:

- Constant product weights
- Less raw material consumption
- Reproducible production results
- High process reliability even with demanding recipes

One platform – three machine concepts

Alpha

For chocolates, bars, decorations and classic depositing applications.

Alpha Nut

Specially developed for products with high inclusions such as nuts, almonds, hazelnuts or dried fruit.

Available as:

- Full nut version
- Hybrid version with nut piston on one side and standard piston on the other side

This means that products with and without inclusions can be processed on the same machine.

Eta / Eta Nut

The ideal solution for retrofits and modernizations of existing production lines.

- Integration into existing lines
- Use with customer's conveyor belt
- Minimal change-over time
- Fast commissioning

Fast product changeover

Flexible markets require flexible production facilities.

The quick-change system for pistons, nozzle plates and nozzles allows product changeovers to be carried out within a short time.

Depending on the configuration, changeover times can be reduced from several hours to a few minutes.

This enables:

- Smaller batch sizes
- Higher line availability
- More product variants on the same machine

Customer feedbacks (no names mentioned for competition reasons)

"The flexibility of the TCM-Alpha allows us to produce different products on the same line. We were particularly impressed by the ease of changeover between different product formats."

"The dosing accuracy of the TCM-Alpha has noticeably improved our product quality and reduced raw material consumption."

One platform – many possibilities

From classic chocolate applications to products with high inclusions or integration into existing production lines – the TRIKNO depositing machine platform grows with your requirements.

Modular. Precise. Future-proof.

The depositing machine family briefly (single side or as a boxer)

TCM-Type	Cylinder liner variant					
	Number of pistons					
	35	45	45/2	45/4	90	30/2
Alpha	9... 12/24	9... 24/48	18... 48/96	36... 192	-	24... 72/144
Alpa Nut	-	9... 24	18... 48/96	-	9... 12/24	-
Eta	9... 12/24	9... 24/48	18... 48/96	36... 192	-	24... 72/144
Eta Nut	-	9... 48	18... 48/96	-	9... 12/24	-

Options and extensions

Option	Recommended for
Heavy Duty	24/7 operations
High Speed	24/7 operations especially for decorations
Y-axis to 300 mm	for CAD models
Nut inclusions	Inclusions >3 mm and >12% share
Double-wall hopper	More stable temperature maintenance
Conveyor extension	a perfect integration into the existing line
Mould Centring	for 3d-One-Shot products
Pre-centring	Higher positioning accuracy at high belt speeds
RFID Detection	Use of multiple moulds at the same time
Hopper agitator	Better distribution of the depositing mass
Hopper partition wall	Triple or Quadro-Shot
Hopper Level Sensor	Use with automatic filling
Water drip lubrication	Highly sugary masses
Piston Set, Nozzle Plates, Nozzles	Different product ranges
