Introduction

Dear customers, partners and agents,
As mentioned in the last issue,
this Newsletter 3-2026 focuses on
the Interpack exhibits.

Trikno @Interpack: Hall 1 / D30

At the Interpack 2026, we will be exhibiting machines for two sectors. On the left side an Artisanal confectioner's sector and on the right side the Industrial performance corner.

Artisanal

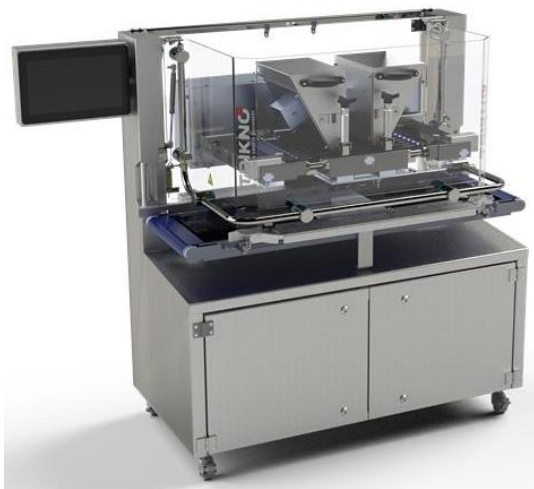

- 1 TVT Vibration Table 750 mm
- 2 **NEW:** TCM-Omega Compact
- 3 TSM Spinning Machine

Industrial

- 4 **NEW:** TCP-ColdPress 2.0
- 5 TVC-Vision Control
- 6 TCM-Alpha CAD

Overview of all exhibited machines

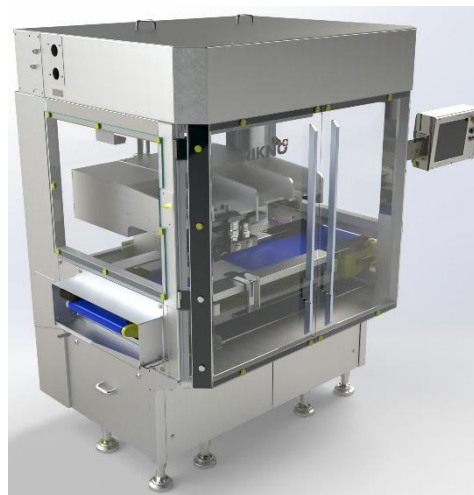

TCM Omega Compact

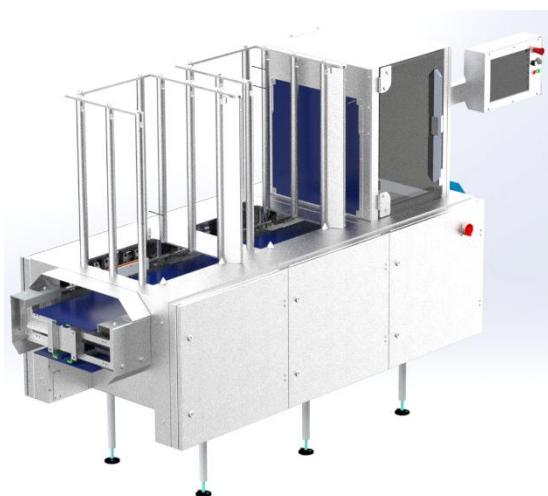

TVT Vibration Table

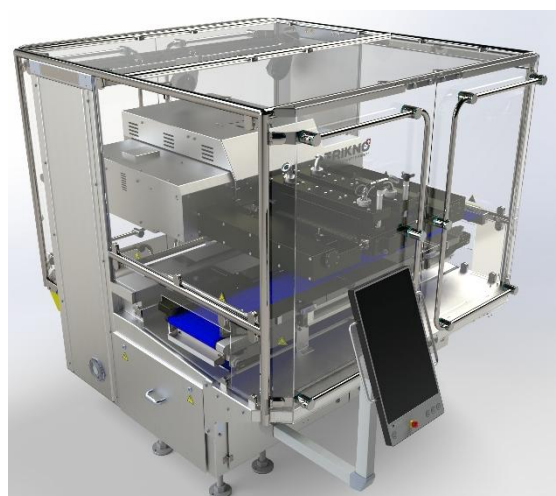

TSM Spinning Machine

TCP ColdPress 2.0

TVC Vision Control

TCM Alpha CAD

TCM Omega Compact (Depositor)

NEW

The Omega Compact depositor is based on the proven single-piston dosing system and, with its larger piston strokes and ability to transport wider moulds (compared to the current TCM OMEGA), it offers far more application options.

In addition, the Omega Compact has a new completely new control and HMI Interface, simplifying programming, settings and general operation.

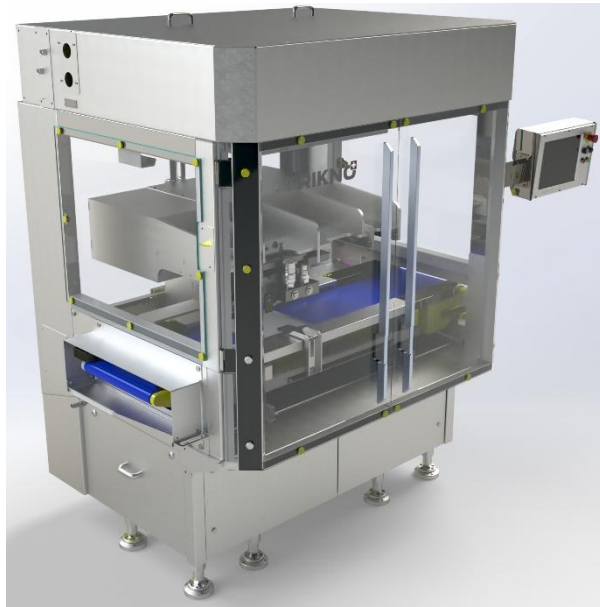

Available in the following versions:

- Omega Compact Z9 as single side depositor
- Omega Compact Z9/18 as Boxer depositor or for One-shot

Technological advantages

- Wide range of applications (wide variety of masses possible)
- Single piston dosing system
- High dosing precision
- 60% larger stroke compared to current TCM Omega
- 30 mm piston diameter available (bigger dosing volume)
- Fast production changeover
- Highly flexible (tool change)
- Easy to disassemble and clean
- Easy to use with the new HMI
- Robust construction and easy to transport

TCP (ColdPress System)

NEW

The ColdPress system enables the production of perfectly thin and constant uniform shells. Creating the perfect base for every quality product. One of the most important advantages of the ColdPress tooling is the capability of continuous, maintenance-free and uninterrupted use.

Available in the following versions

- ColdPress 1.0 as a classic solution (with rim-cutting) for trays with 100% uniform weight
- ColdPress 2.0 with air spring stamps (no rim cutter required) for shells without any chocolate waste

Technological advantages of ColdPress 2.0

- No Rim cutter needed
- No chocolate waste
- No need for a 2nd ColdPress for book-moulding, as different geometries of the front and bottom can be used in one plate each
